

Overview and Issues Associated with the Deepwater Horizon Accident

Global Interdependence Center Meeting. LSU Center for Energy Studies
August 12, 2010

GOM Offshore Oil and Gas – Economic Overview

- In 2008, over **420 MMBbls** of oil and **2.4 Tcf** of natural gas were produced in the Gulf of Mexico OCS.
- Employs over **200,000 workers** in the Gulf Coast region. Over **100,000 workers** associated with offshore activities.
- Contributes almost **\$100 billion** to Gulf Coast states' GDP.
- GOM accounts for **30** percent of total U.S. crude oil production.
- Deepwater areas produced **76** percent of all GOM crude oil production in 2007.

Note: Gulf Coast states include Louisiana, Texas, Mississippi and Alabama

GOM Offshore Oil and Gas – Recent Deepwater Structure

Has 5 independent E&P partners plus one midstream partner/operator. Operates in 8,000 feet water depth.

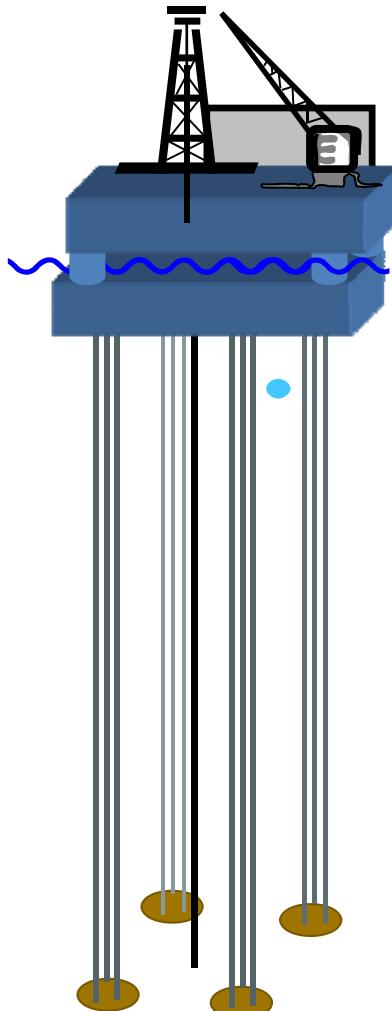

Enterprise and the Atwater Valley Producers Group, which includes Anadarko, Dominion, Kerr-McGee, Spinnaker and Devon Energy.

Process ultra-deepwater natural gas and condensate discoveries in the previously untapped Eastern Gulf of Mexico.

- **1 Bcf per day** of processing capacity, the largest in the GOM.
- Tie-back flow lines that are longer than **45 miles**, the longest in the GOM.
- **2.4 miles** of mooring lines.
- The Gulf's **deepest suction pile installation**.
- The Gulf's largest monoethylene glycol (MEG) reclamation unit.
- The Gulf's deepest pipeline inline future tie-in subsea structure.
- The Gulf's **longest single subsea umbilical order**. (carbon instead of steel)
- The **flow lines are 210 miles** in total length, and the umbilicals contain about 1,100 miles of stainless steel tubing.

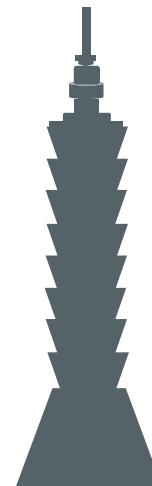

GOM Offshore Oil and Gas – Economic Overview

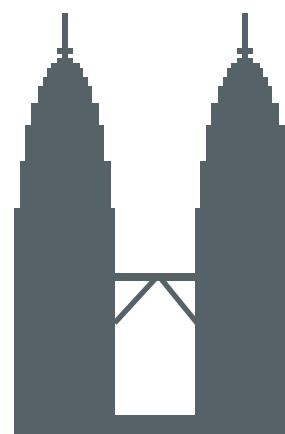

Mars Tension Leg Platform
3,250 feet

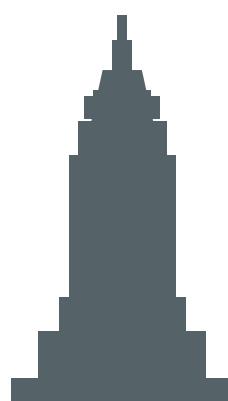

Sears Tower
1,729 feet

Taipei 101
1,667 feet

Petronas Towers
1,486 feet

Empire State Building⁵
1,472 feet

Structures in the GOM are as large some of the world's largest buildings.

GOM Offshore Oil and Gas – Deepwater Statistics and Considerations

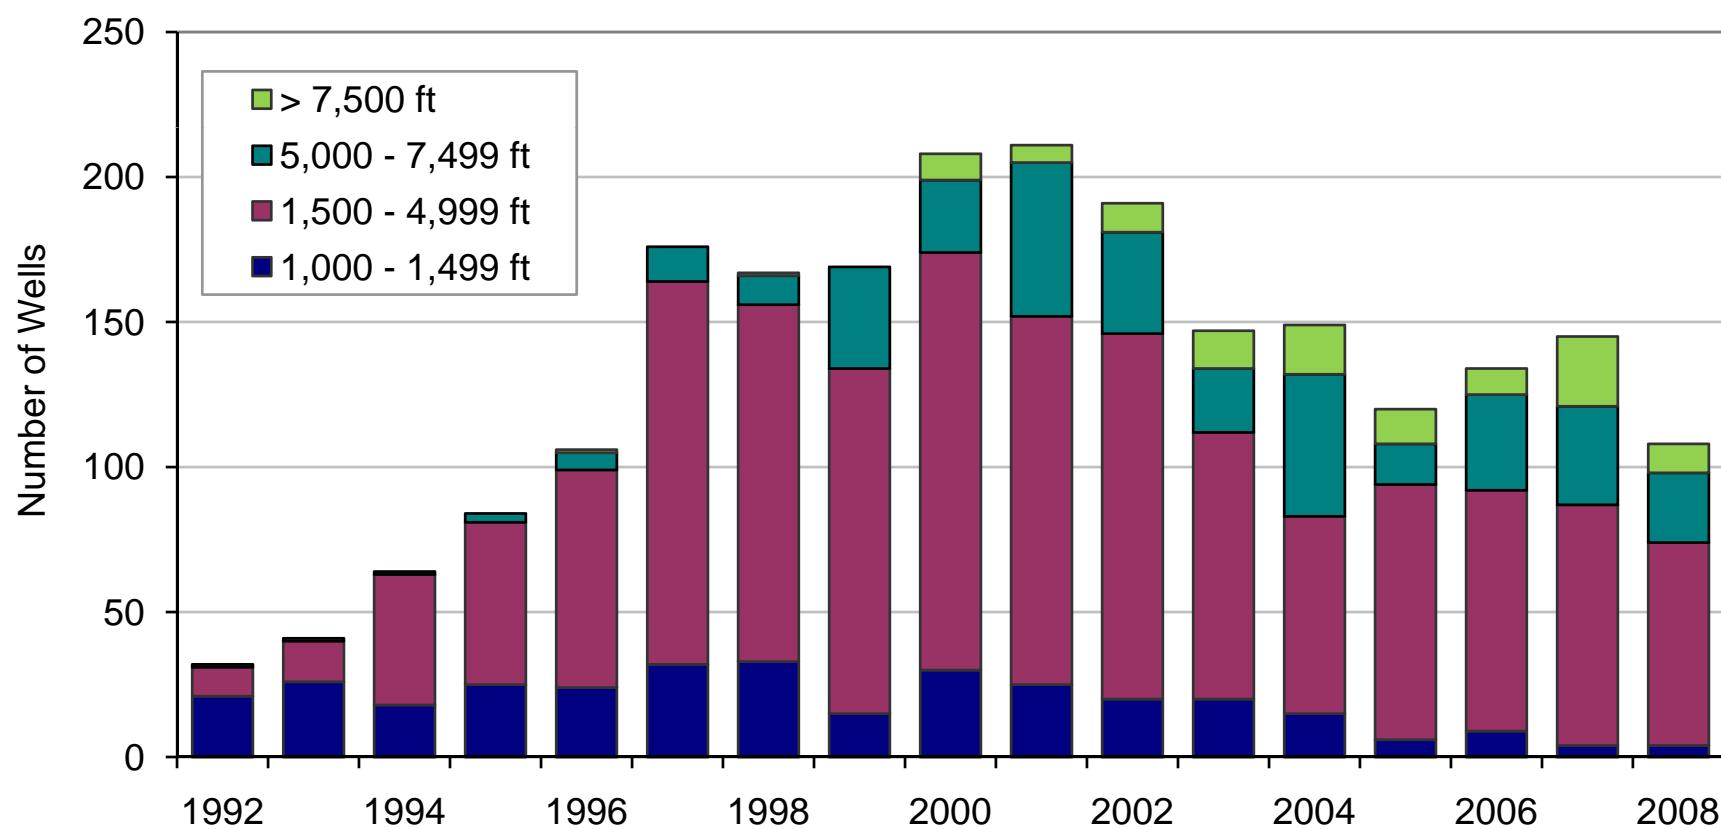

- Over \$1.5 billion in surface structure and equipment needed to service deepwater wells.
- Drilling costs \$80 million to \$120 million per well.
- Drilling crews between 200 to 300 for large drilling project.
- Structures and wells are typically 100 miles to 200 miles from the coast.
- Water depths between 5,000 feet to 8,500 feet.
- Drilling depths of 15,000 feet to 28,000 feet (lower tertiary).

GOM OCS Deepwater Wells

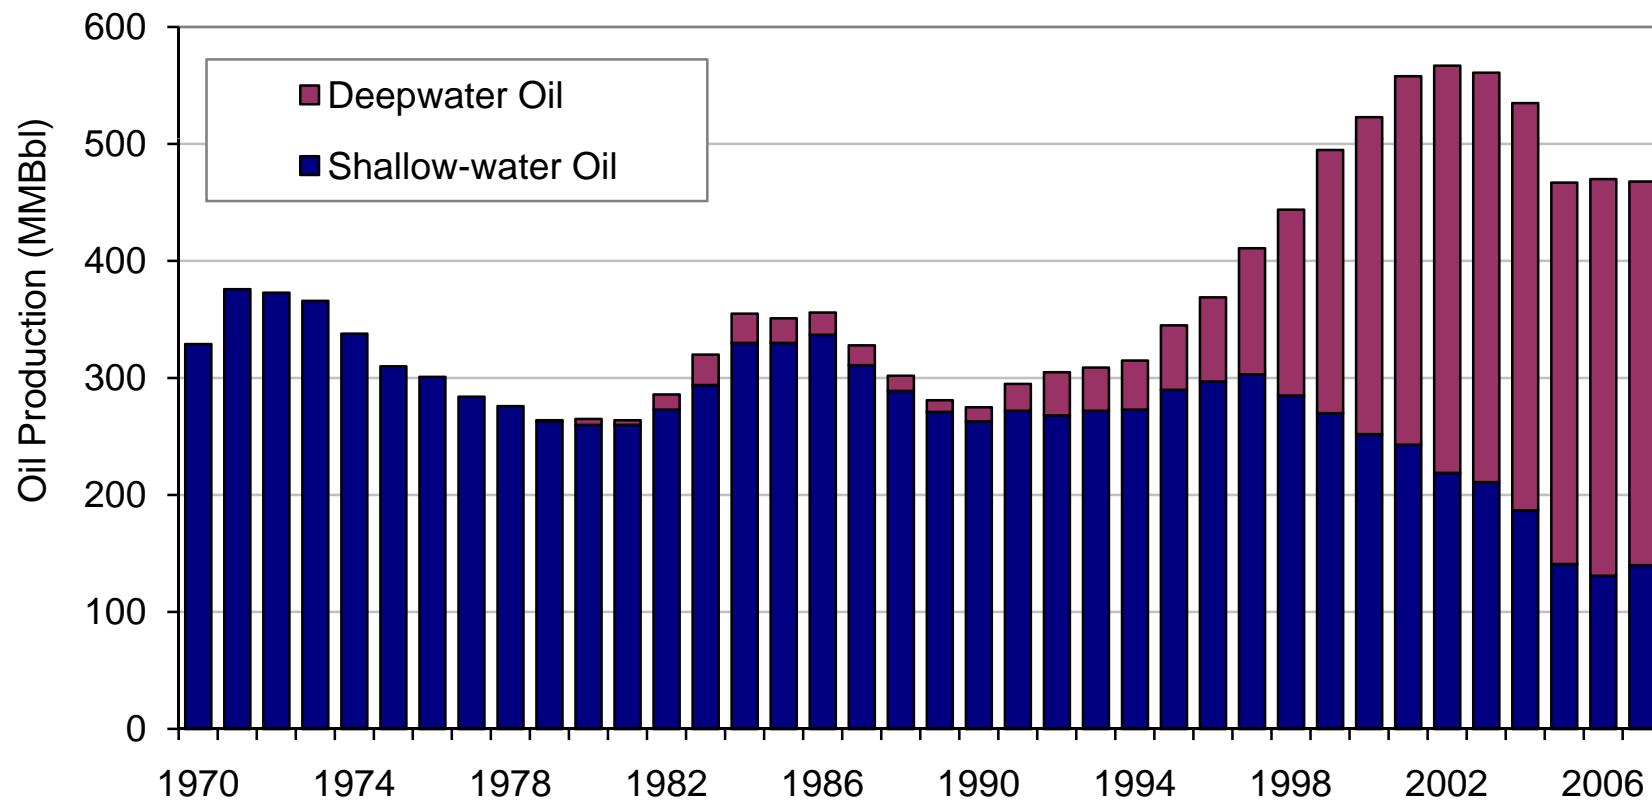

Active deepwater wells are down relative to the earlier part of the decade, but still make considerable contributions to OCS production levels.

GOM OCS Deepwater Crude Oil Production

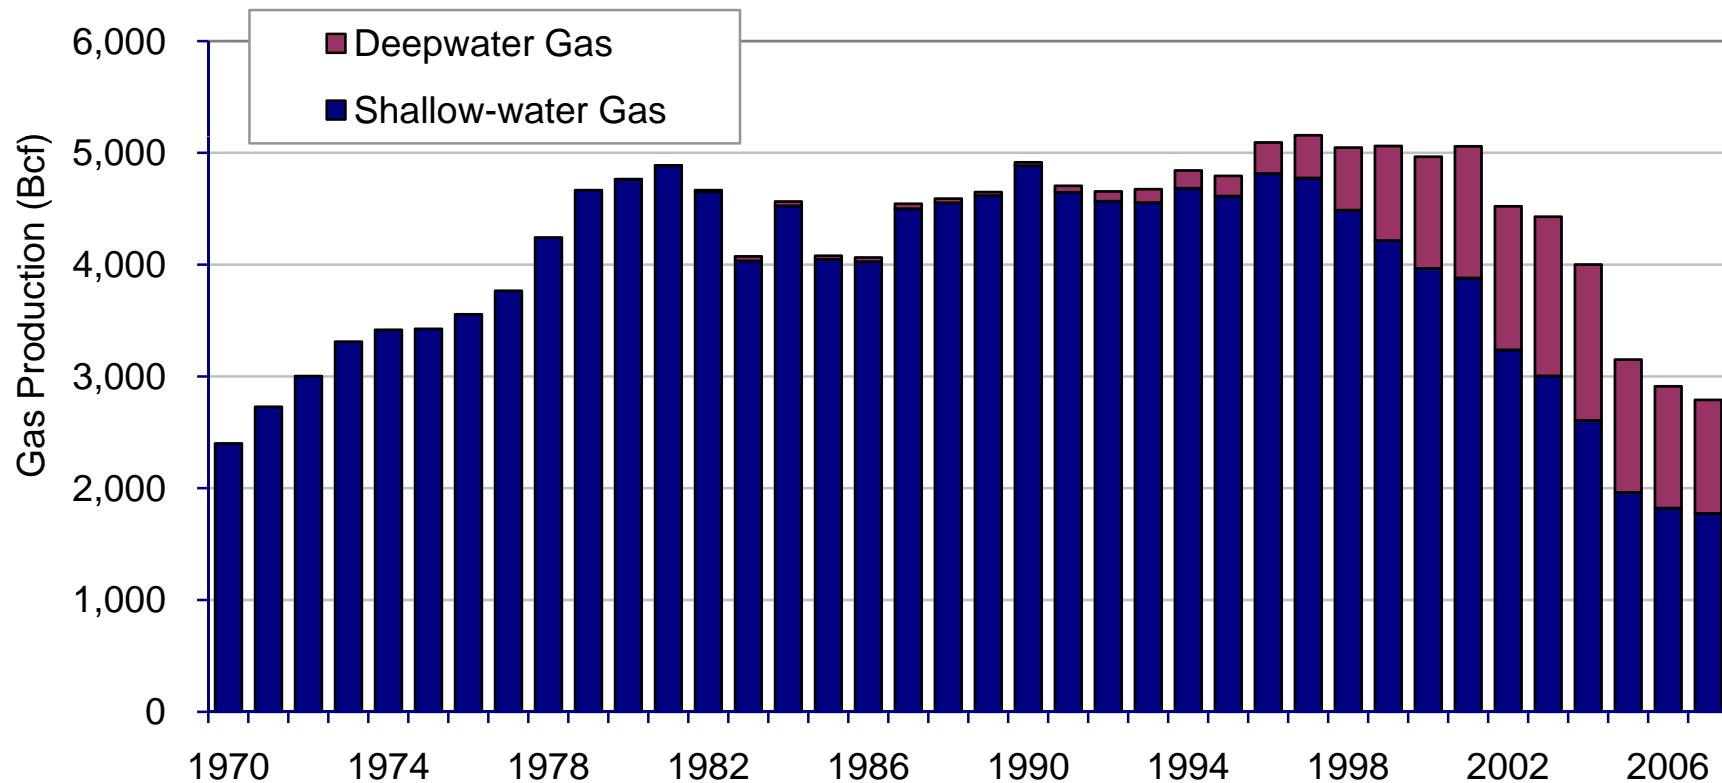

The significant increase in deepwater crude oil production has been a major new source of domestic crude oil supply.

GOM OCS Deepwater Natural Gas Production

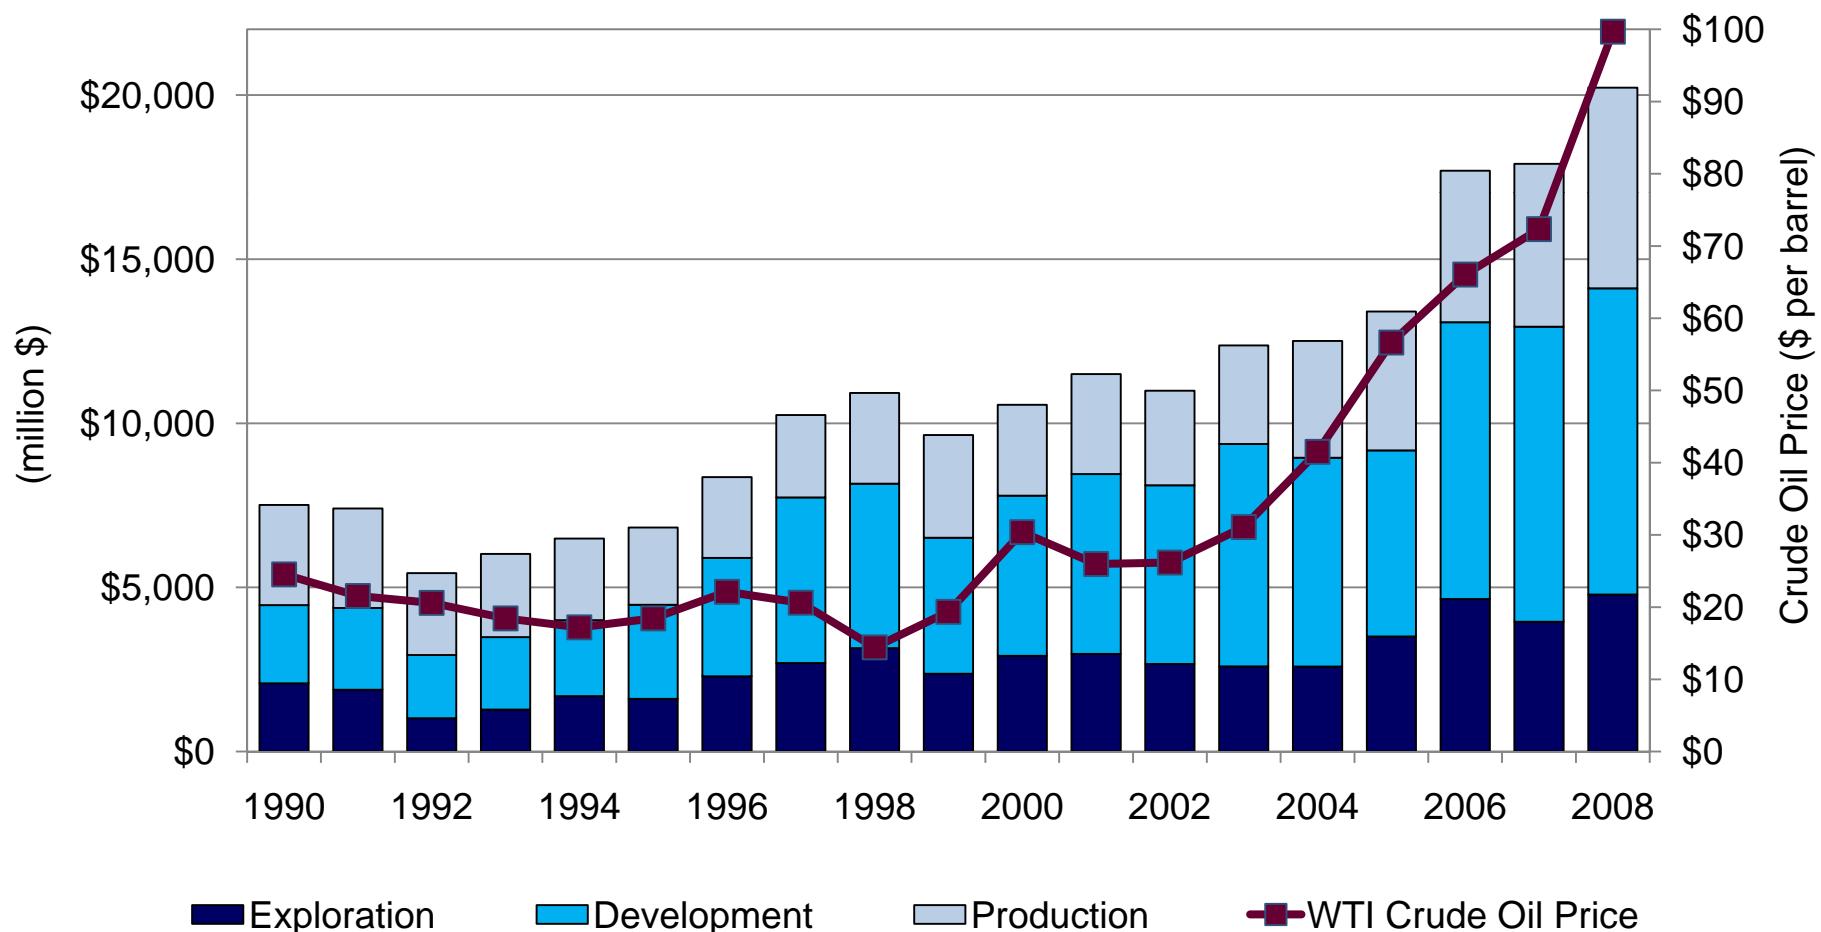

Deepwater natural gas production has remained relative constant in recent years, despite the overall GOM gas production plummet in 2002.

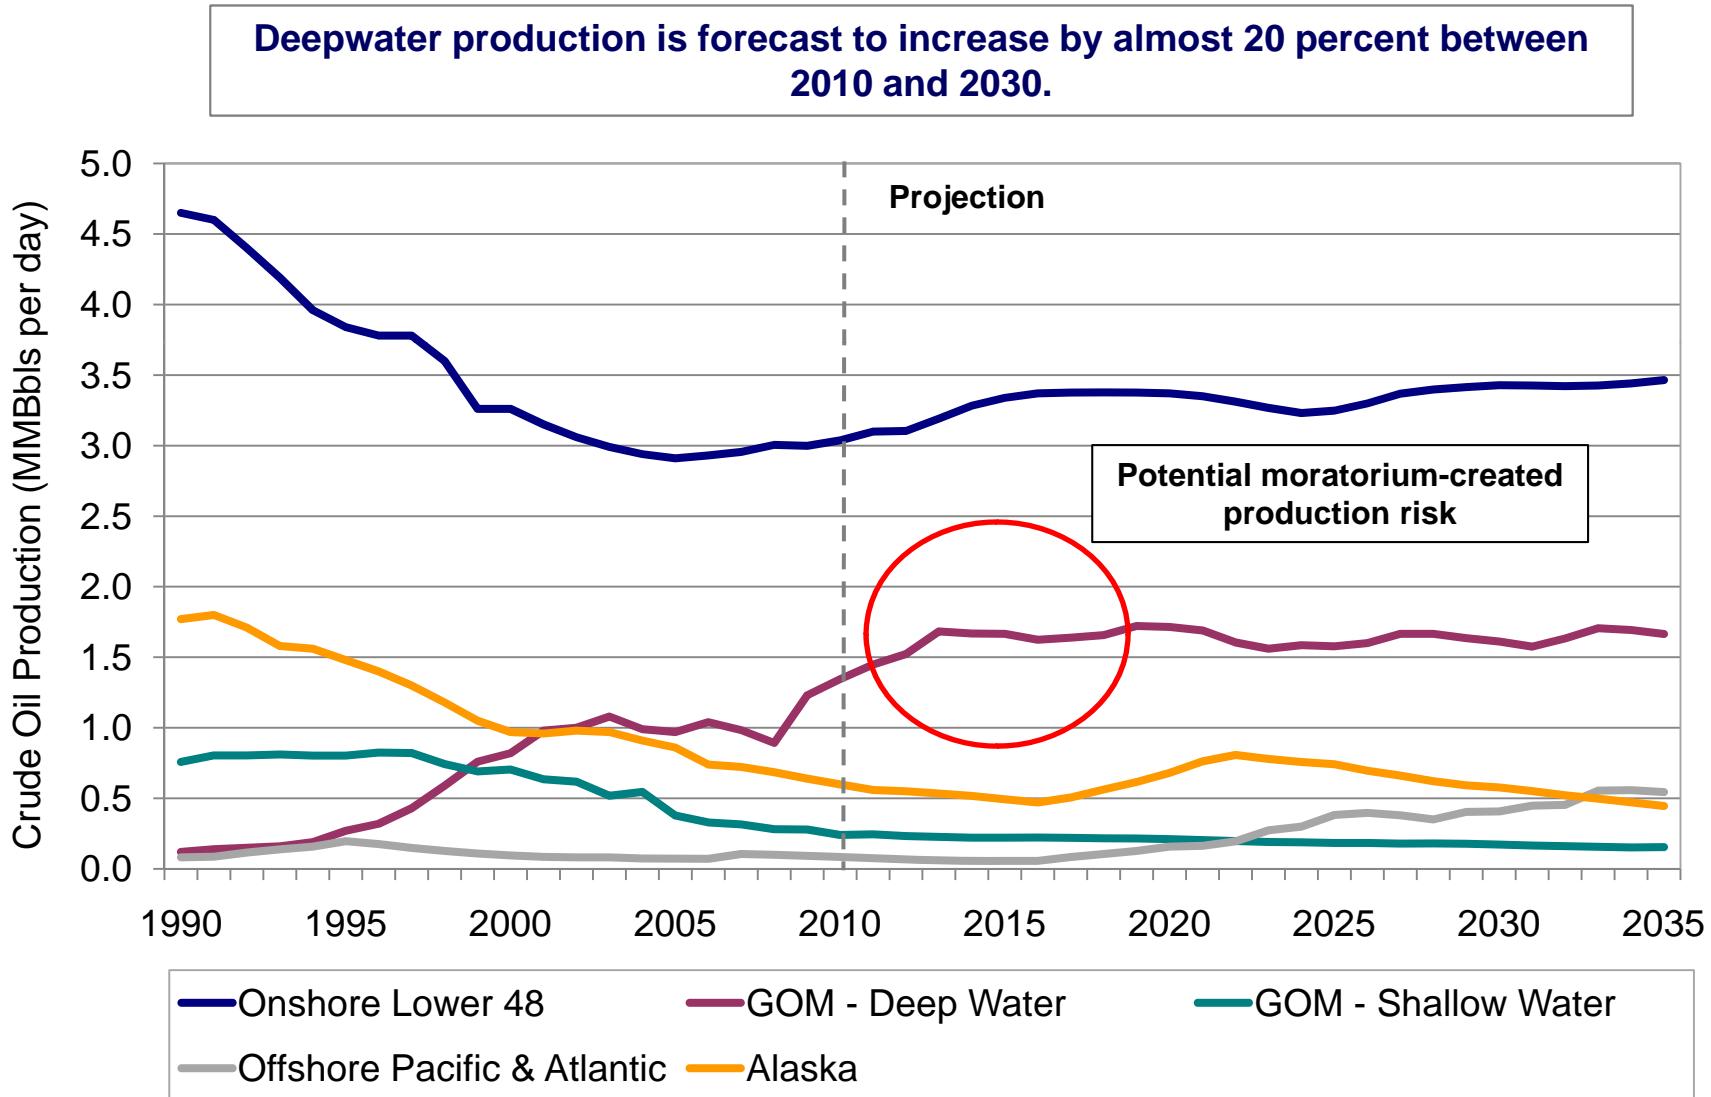

U.S. Offshore Capital Expenditures

The federal OCS, and its deepwater regions, account for a large share of the increasing capital investments for major oil companies.

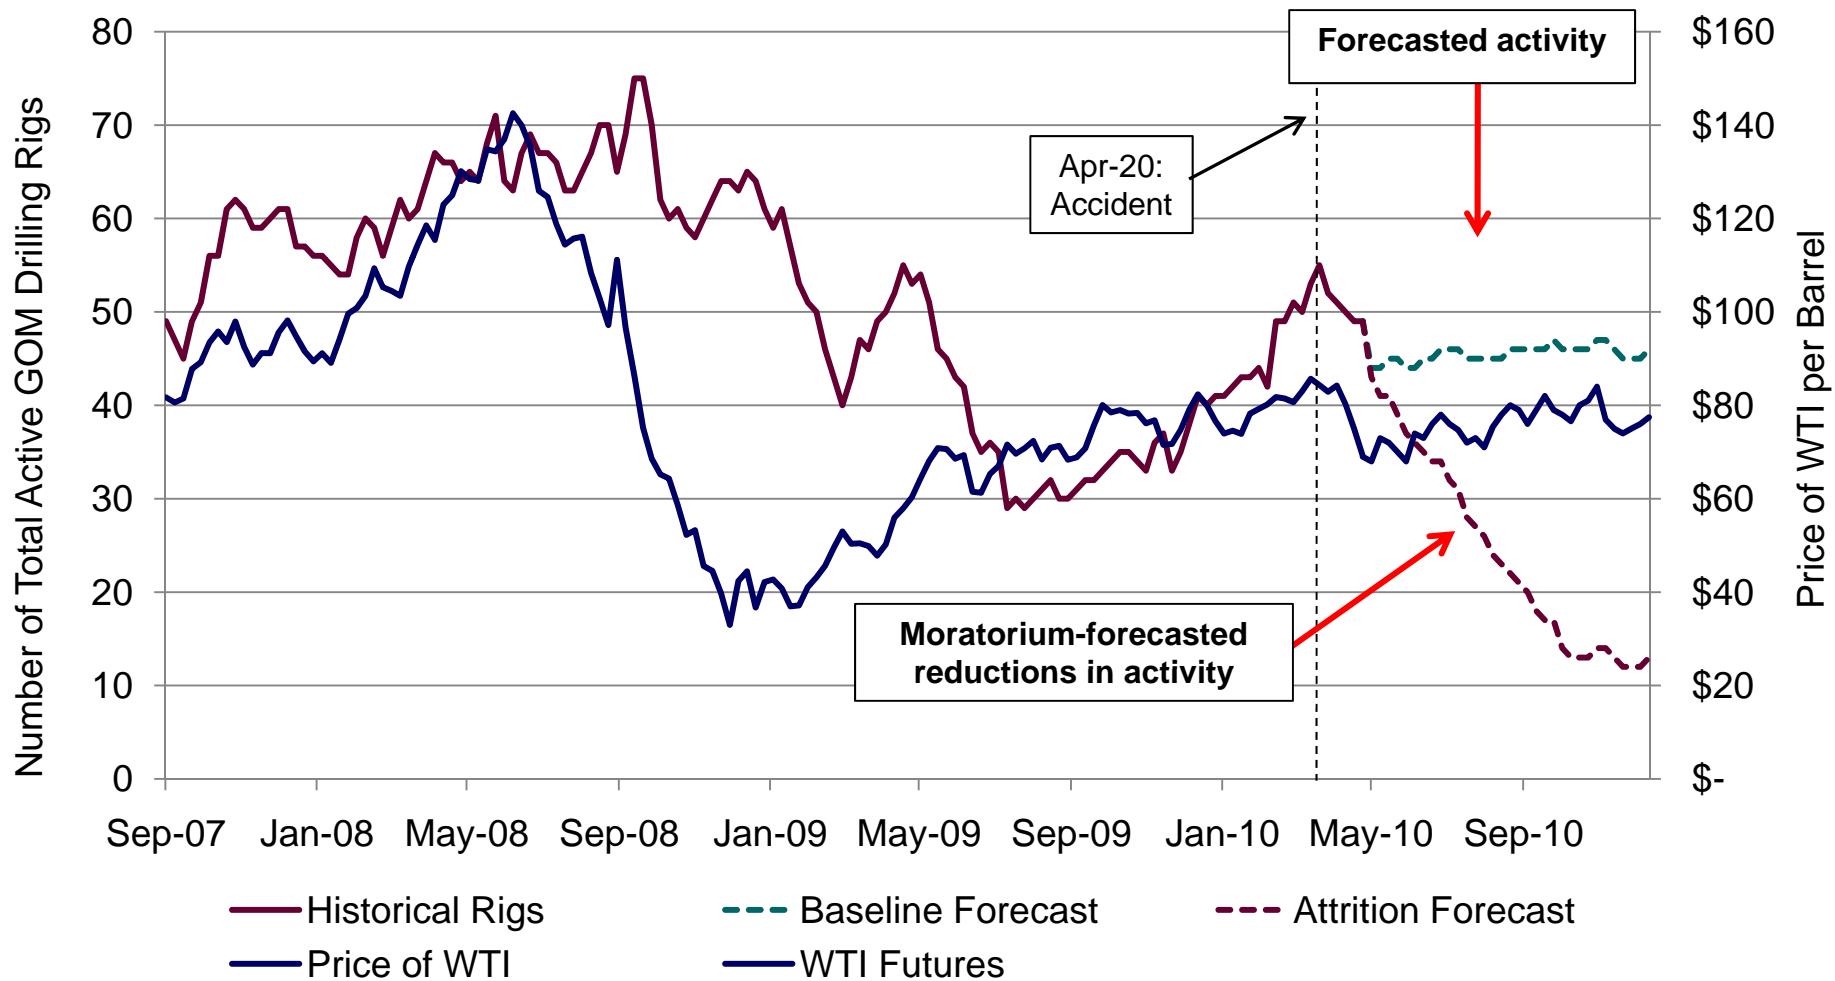

U.S. Crude Oil Production Forecast

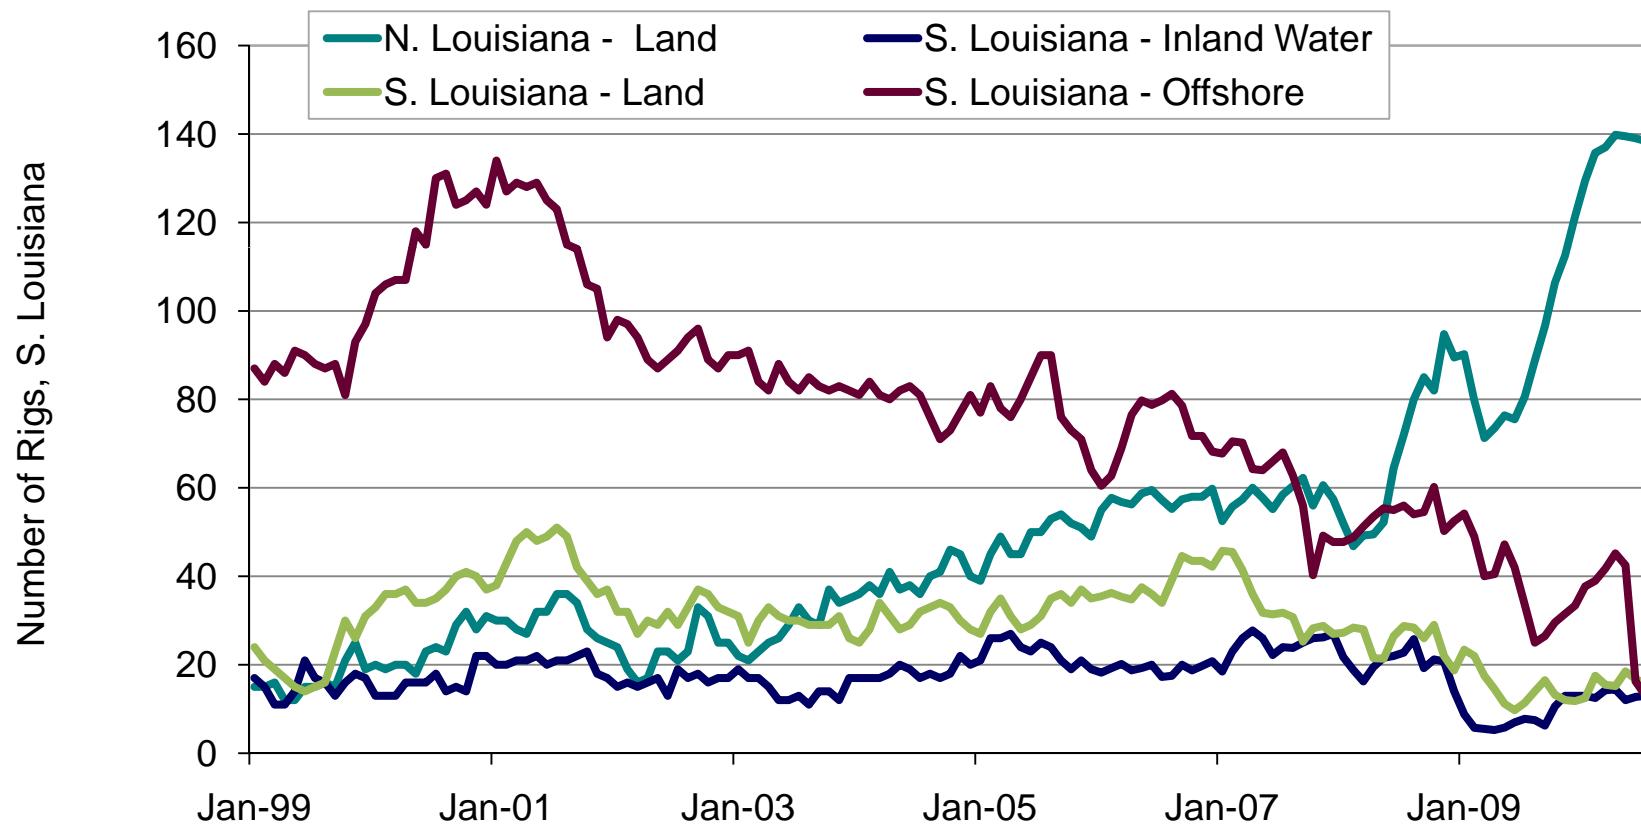

Gulf of Mexico Offshore Rig Forecast – Moratorium Impact

Sources: Dept. of Interior, Energy Information Administration, Baker Hughes, CME Group (NYMEX)

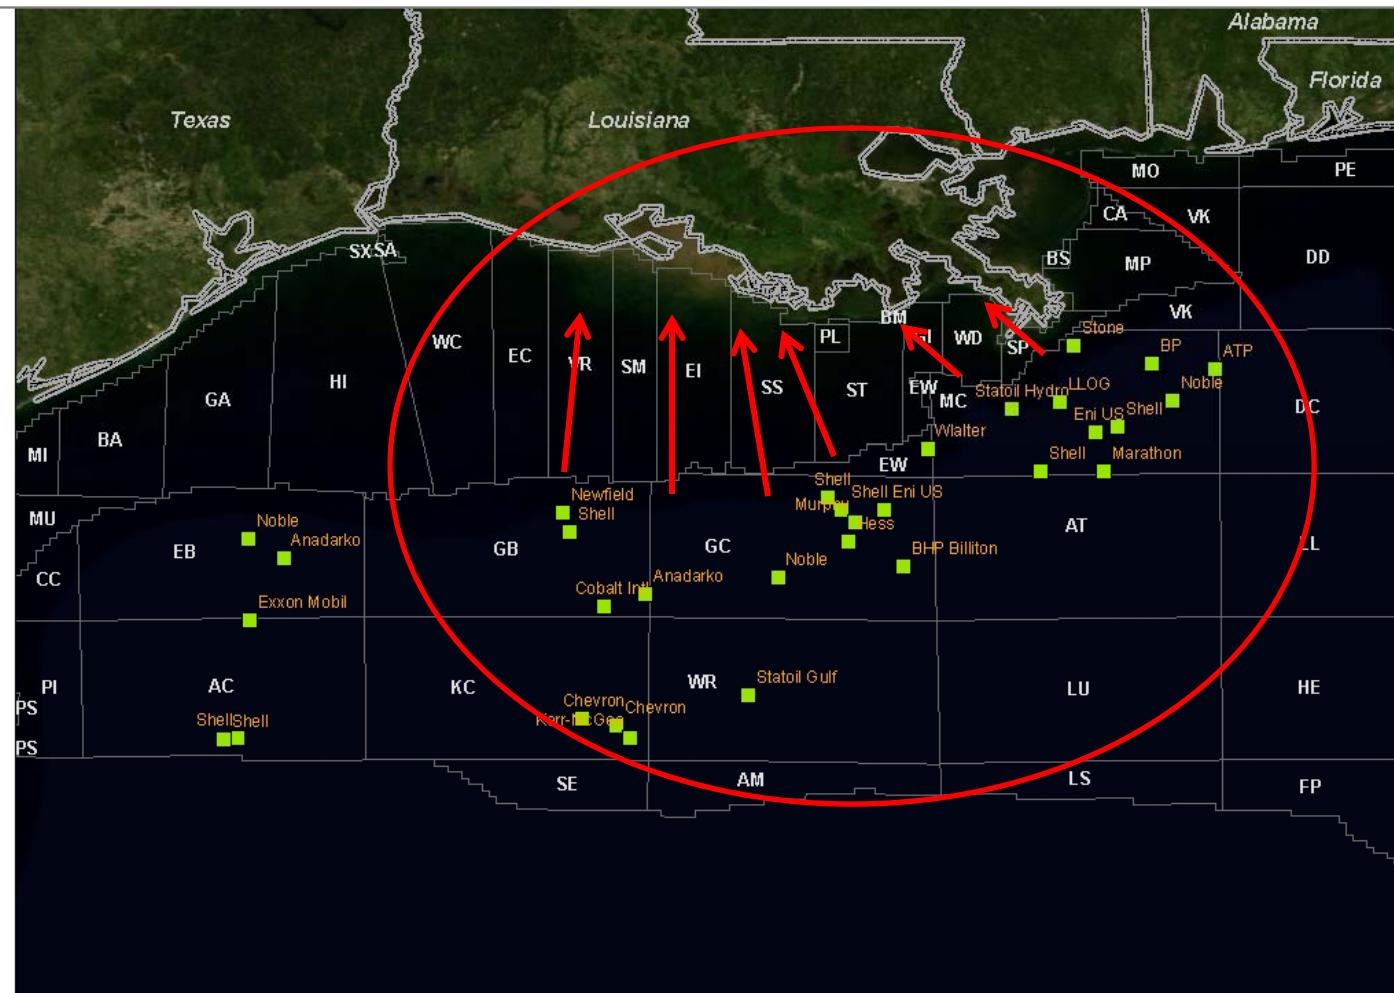

Active Drilling Rig Trends in Louisiana

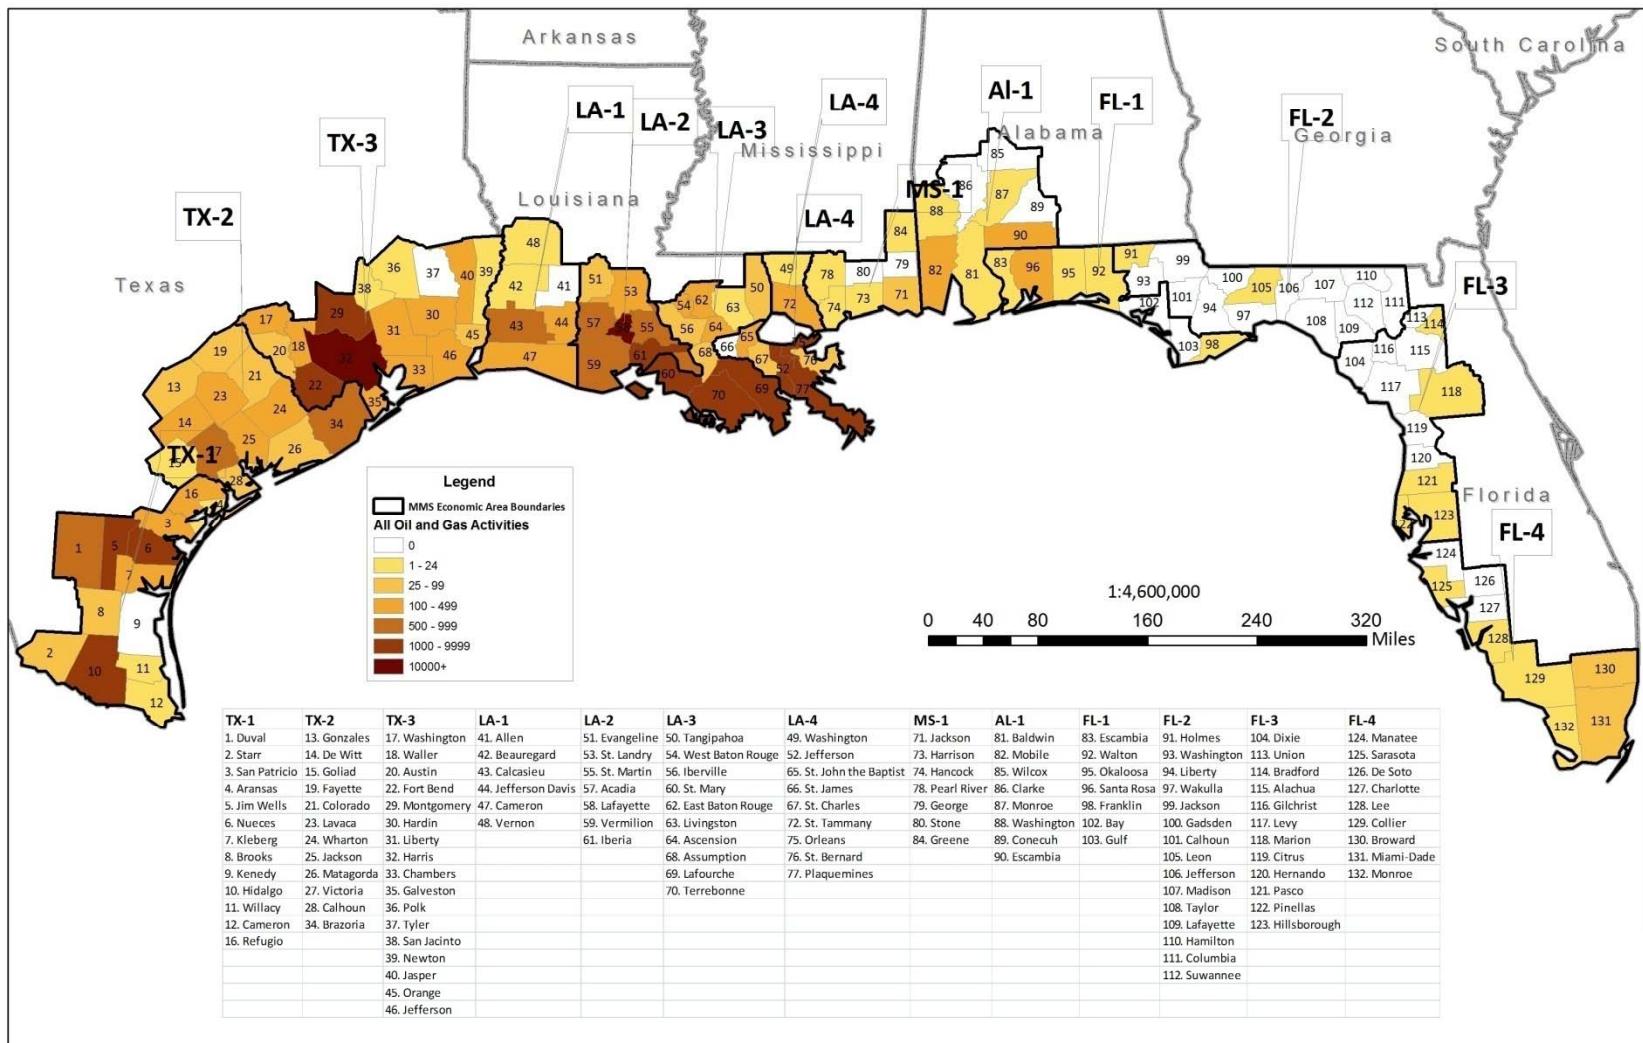

Moratorium Impacted Rigs

Impacted rigs anticipated to operate in very close proximity to Louisiana ports and support services.

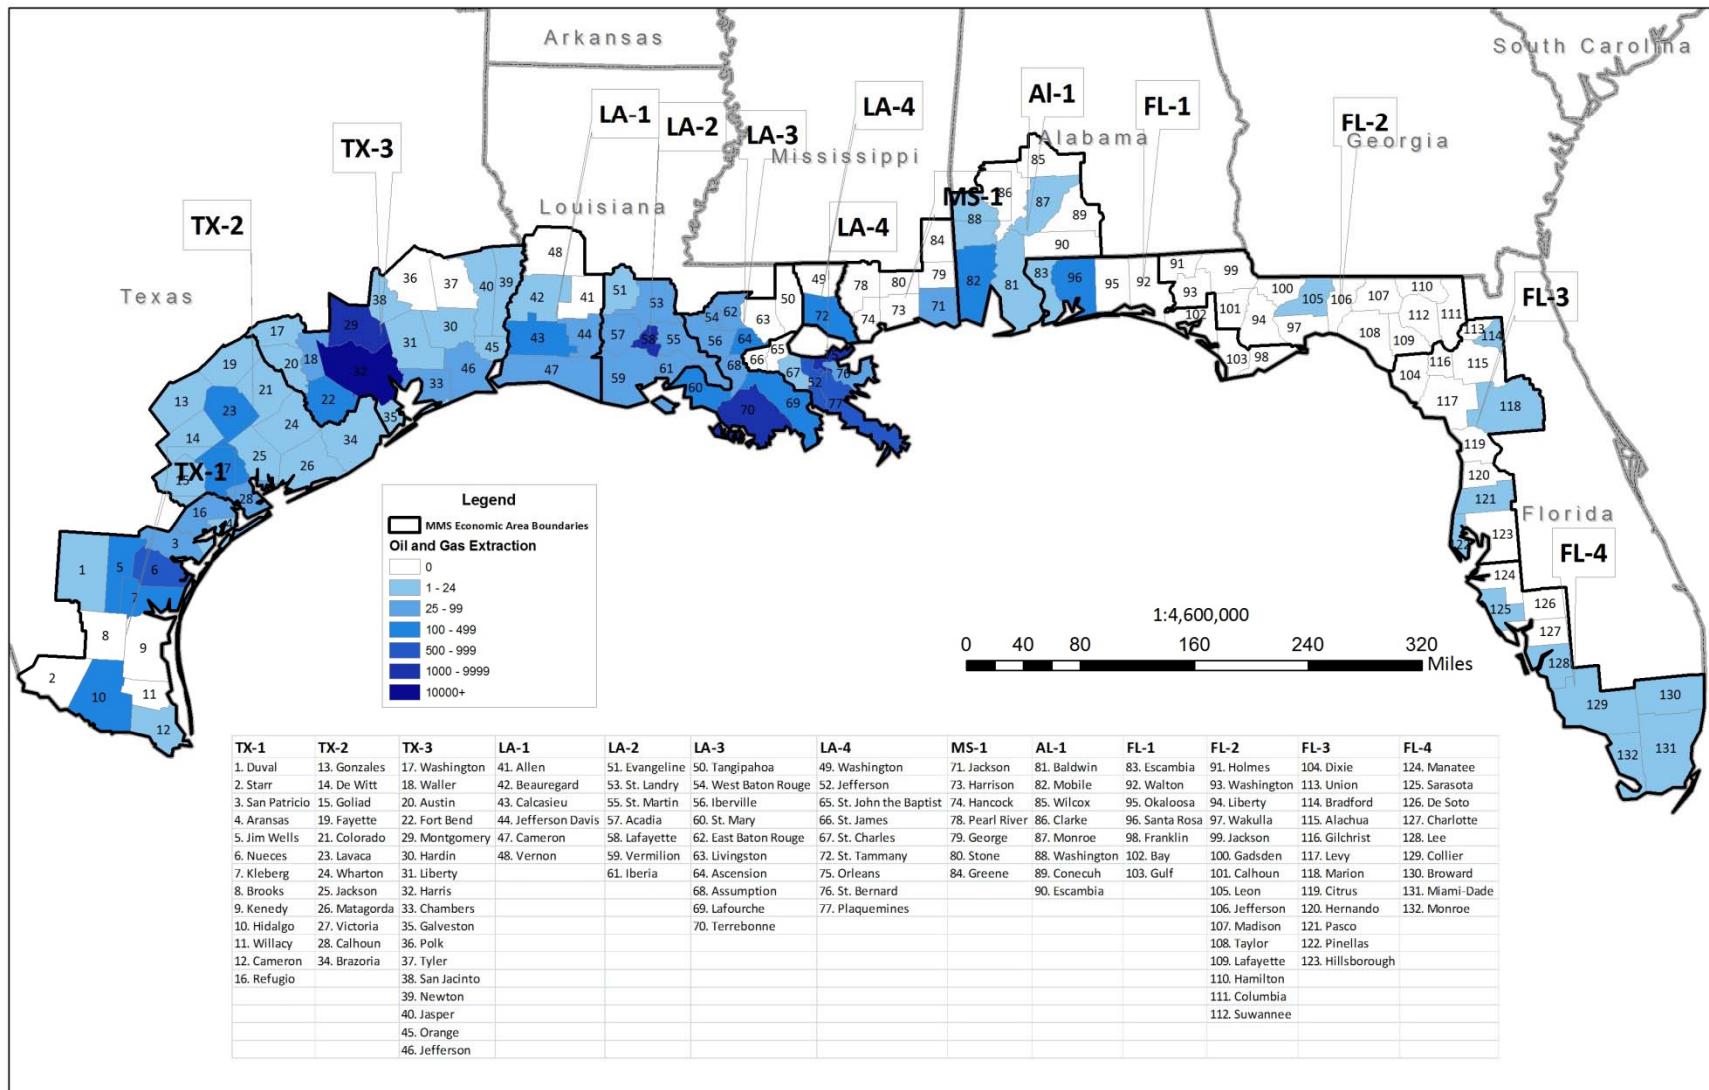

Gulf Coast Oil and Gas Employment – All Activities

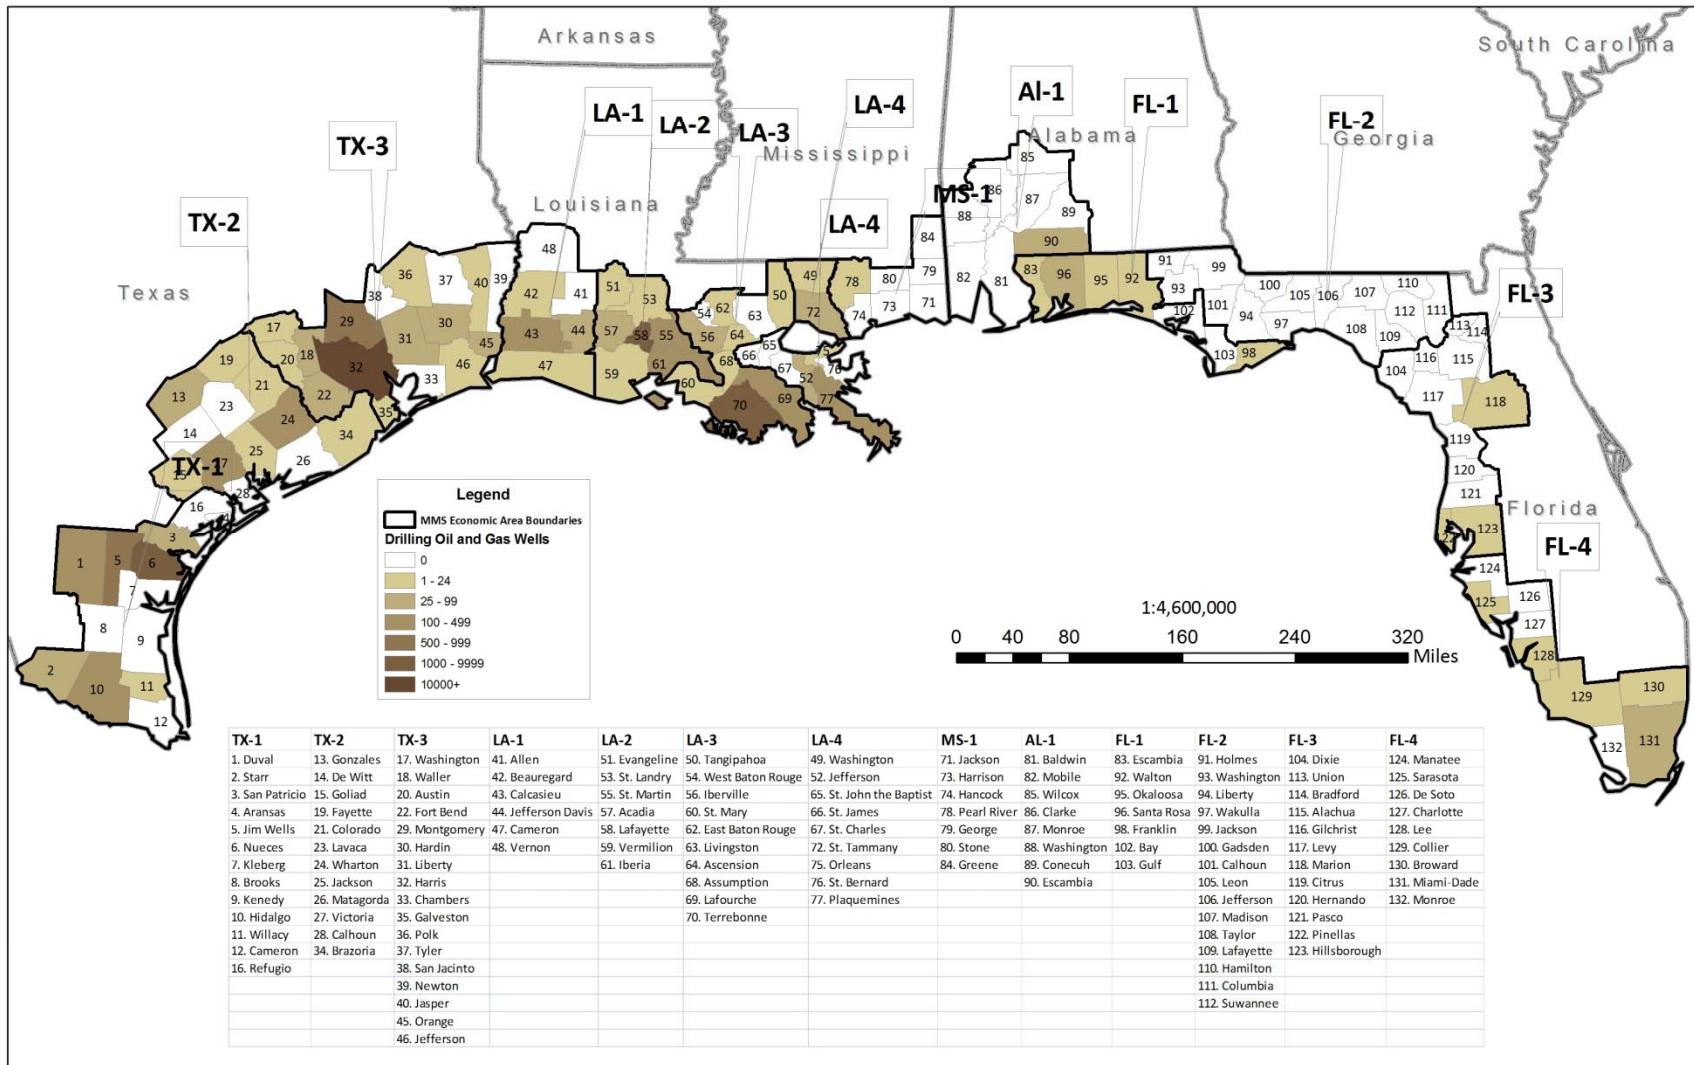

Gulf Coast Oil and Gas Employment - Production

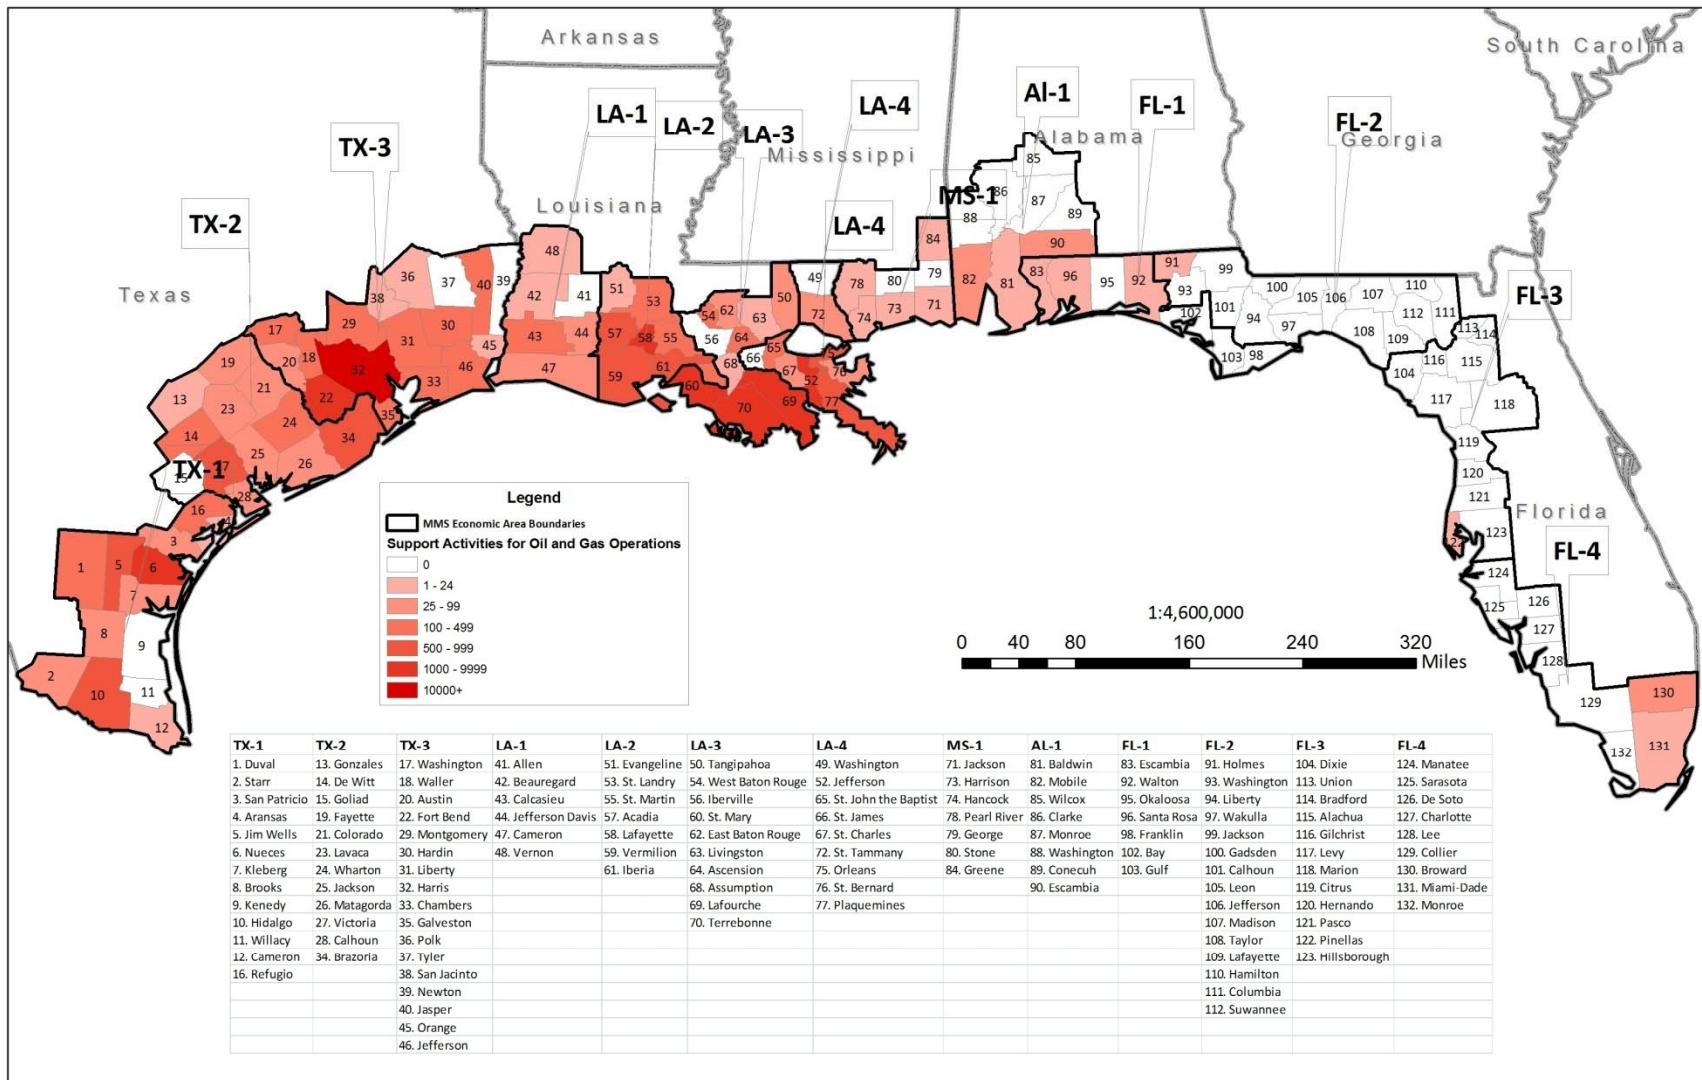

Gulf Coast Oil and Gas Employment - Drilling

Gulf Coast Oil and Gas Employment – Support

Potential Moratorium Impacts – Louisiana Only

	Louisiana-Specific Impacts						
	Employment (cumulative)		Output		Wages		
	<i>Impact Period:</i>	<i>Low</i>	<i>High</i>	<i>Low</i>	<i>High</i>	<i>Low</i>	<i>High</i>
Near Term (to 3 months)	8,200	9,952	\$ -	\$ 1,140	\$ 522	\$ 636	
To Moratorium (3-6 months)	9,952	11,351	\$ 1,140	\$ 1,589	\$ 636	\$ 788	
Monthly post 6 months	384	466	\$ 148	\$ 150	\$ 42	\$ 51	
<i>Impact Period:</i>		<i>Moratorium plus permitting (120 day)- Louisiana Only</i>					
Peak to New Start (10 Months)	11,488	13,215	\$ 1,730	\$ 2,187	\$ 802	\$ 991	
Peak to New Start (14 Months)	13,024	15,079	\$ 2,321	\$ 2,786	\$ 969	\$ 1,194	
<i>Impact Period:</i>		<i>Moratorium plus permitting (120 day)- Louisiana Only- Higher Prices</i>					
Peak to New Start (10 Months)	12,000	13,836	\$ 1,927	\$ 2,387	\$ 858	\$ 1,059	
Peak to New Start (14 Months)	14,048	16,322	\$ 2,715	\$ 3,185	\$ 1,080	\$ 1,330	

Potential Moratorium Impacts (Short Run) – Potential Parish Level Impacts

Long Run Issues Associated with Spill

Some longer-run issues for Louisiana and Gulf Cost include:

- Intermediate-run implications (12-36 months) of current drilling moratoria and the decreased economic activity.
- The impacts that likely regulatory changes will have on GOM operations and costs that will impact investment profitability.
- Changes in operator liability requirements and the cost of insurance for GOM operations, particularly for independent operators that have a relatively large (in total) economic presence in Louisiana than the majors.
- New excise taxes, fees, surcharges, and the elimination of drilling incentives such as the Deepwater Royalty Relief Act and Energy Policy Act of 2005 EPAct deep-gas drilling incentives (shallow water, well depths in excess of 20,000 feet).
- Impacts on opening the Eastern GOM and elimination of potential economic opportunities for Louisiana service ports (Venice, Fourchon) and LA-based service companies.
